

Bus stop for jersey Aero Club

in the bus stop there will be airplane seats in the bus stop. it will be glass so that when the sun reflects on it it will reflect the planes and the logo. The back of it will have 2 more planes and would be a lot bigger than the other planes. The planes will be made out of aluminium and the glass will be the roof, sides and back. It will be made out of strong glass. it will have 2 layers of Shatter proof glass. we looked at the cost of the wing and the tube and it is in the aluminium tube for the supports and it is in the 12,000 budget. So with all the things in it and on it. We have all the requirements. It has the club logo and is impactful because it is effectively and it can fit a lot of people. It can be located anywhere and if you have a wheelchair it will be easier to get into and hopefully it doesn't have a bump so people can get there more easily. They can learn about the aero club. There will be an outside space giving them information about it and how it was made.
