

On our bus stop shelter we have made sure to add a plane for it to be aviation themed and to represent Jersey Aero Club the name of the club and the logo will be on there too. There are seals and we have also left space at the side for wheelchair users and prams so they have accessibility to the bus slop and more space to be and not have to be in front of the seats. The seats are comfortably padded and also double padded with material so the foam inside does not get soggy and the material is made of a smooth plastic coated with a stitching inside. The windows are plastic so they do not smash and cause problems, and they are tinted to not let too much glare in. The plane as an idea could be made of old broken planes and will be hollow so it is light, and the mental parts which hold the windows are stainless steel so it does not rust and the colors does not have to be that but they can be any colour that the Jersey aero club chooses. The design is within size and budget and will fit in well with the surrounding areas as the colours are neutral. There will also be boards to display the bus timetables.
